

ABSTRACT

The invention concerns a method of communicating

- 5 between an access point (20) of a short range rf network
and a user terminal (10) of the short range rf network. The
method comprises using a first short range rf transceiver
(104) at the access point for access communication with a
user terminal (10) for communicating information relating to
10 establishment of a connection with the user terminal (10),
and using a second short range rf transceiver (106) at the
access point for user data communication for
communicating user data with the user terminal.
